AVL Tree Rotation Templates

This template supplements the class slides for AVL tree node *Insertion* and *Deletion*. It does not show Balance Factors, which can be computed as:

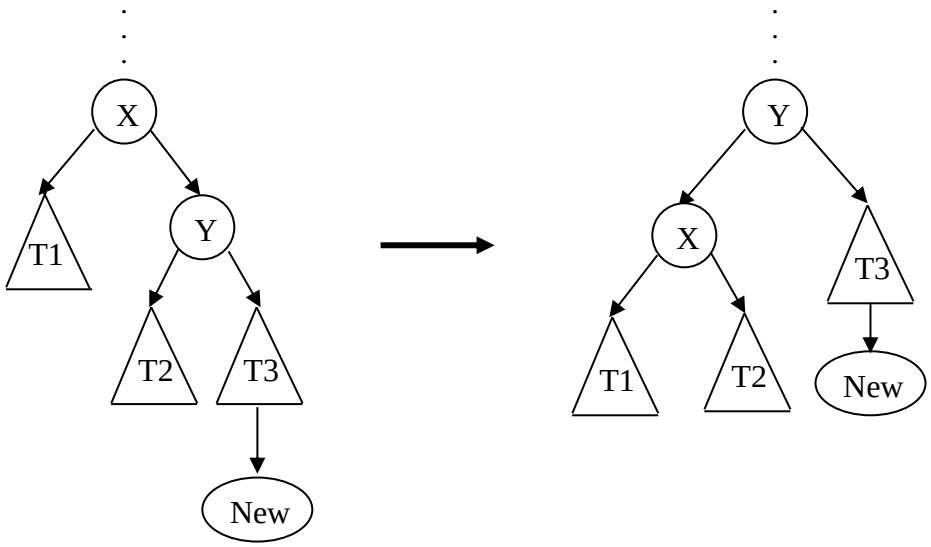

BF = LH – RH or BF = RH – LH

X is the first critical node to be balanced, Y is the imbalanced child of X, and Z is the is the imbalanced child of Y.

Case 1.a: (Single Right Rotation)

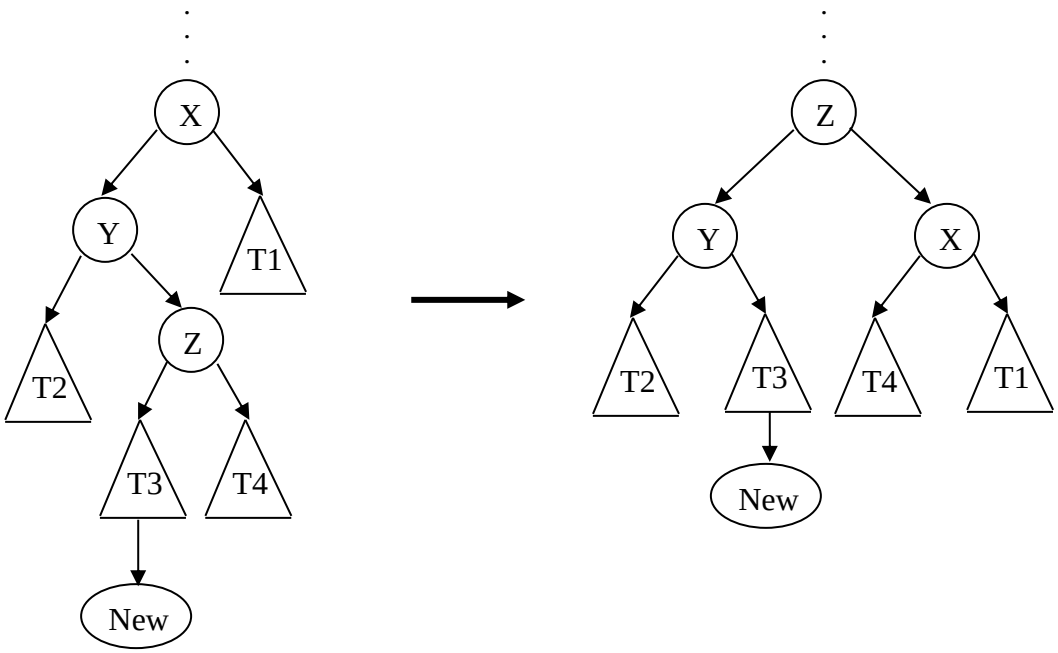

Case 1.b: (Single Left Rotation)

Over →

Case 2.a: (Double Rotation)

Case 2.b: (Double Rotation)
